

POND TROUBLE

SCHOOL

The water at the pond next to the school keeps flooding. The students in the school are trying to figure out what is going on. They observe that there seems to be a bunch of logs and twigs in one area of the pond and many small trees are cut down. What is a good guess about the cause of the flooding?

**too much
rain**

**beavers are
building a dam**

**sticks are
getting stuck
in the pond**
