

# How We See Objects

Read the text and look at the picture to learn how we see things. Then, finish the sentences by checking off the correct words.

Our **eyes** help us to see the world around us. In order to see things we need **light**. Light waves bounce off objects and travel through the **pupil** of our eye to the **lens**. The **lens** directs the **light** beam to the **optic nerve** at the back of our eye which sends a signal to our **brain** forming a picture of what is in front of us.

**1** We cannot see things without...

☐

**sound**

☐

**air**

☐

**light**

**2** The optic nerve sends the light signal to our...

☐

**heart**

☐

**brain**

☐

**ears**
