

Plants and Sunlight: Part 2

Light affects plants' life in many ways. Lots of plants will **bend towards** the biggest source of light like the sun.

In colder places trees grow **bigger branches** on their **south side** that gets the most sunlight. Some flowers **open in the morning** and close when the sun goes down.

North  South

Check off all the **true** statements.

1. Plants bend towards sunlight.

2. Trees have bigger branches on the north side.

3. Some flowers close at night.
