

Identify the Text Features

Text features help readers to navigate through informational texts. Look at the article and the text features in that article. Check the correct name.

Solids, Liquids and Gases

Matter is all around us. We are all made up of matter and matter is made up of tiny parts called **molecules**. Matter can be in three different forms: solids, liquids or gases. In a solid, the molecules are packed very tightly together and they can't move around much. This is why solids hold their shape like a desk or a wooden block. In a liquid, the molecules are a little farther apart. This is why liquids take the shape of whatever container they are put in, because the molecules can move around. In a gas, the molecules are far apart and move around easily.
