

ASTEROID FACTS

Read the cool asteroid facts below. Check the correct words to complete the sentences.

Asteroids are irregular shaped space rocks. They are the leftovers of a planet that never fully formed. All the rocks leftover from this failed planet are grouped close together forming a belt. Like the planets, the asteroid belt orbits the sun. This asteroid belt is located between the orbits of Mars and Jupiter.

An asteroid is a bit of

snow

rock

Most of the asteroids go round the Sun between the orbits of Mars and

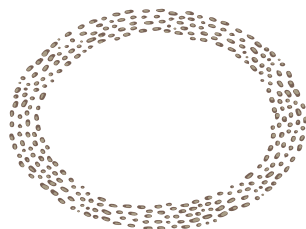

Venus

Jupiter

This area is called the

"asteroid belt"

"asteroid ring"
