Read the Moon facts below.  
Check the correct answers to complete the sentences.

A **satellite** is an object that travels around another object. The moon travels around the Earth. We say that the Moon is Earth's satellite. Traveling around the Earth can also be called an **orbit**. The moon orbits around the Earth.

You see the moon almost every night, but it is always a little different and it even disappears for a few nights! This happens because the Moon orbits around the Earth. It takes about 27.3 days for the moon to complete one full orbit around the Earth. Every 27.3 days you will see a full moon.
