

Volcano Words

Read the text.

Then, answer the questions below by circling **true** or **false**.

Volcanoes have different kinds of materials. **Magma** is the liquid found inside the volcano. When this comes out, or **erupts**, it is called **lava**. It is red, orange, or white depending on its temperature. Lava is extremely hot and slides down the sides of the volcano. The tiny, hard pieces of rock that erupt are called **ash**. Ash clouds can destroy a whole town.

1. Magma can move.

True

False

2. Lava cannot move.

True

False

3. Ash is not dangerous.

True

False
