

Patterns in Temperature

Meteorologists look at patterns in the weather in order to make predictions. One thing that they do is find patterns in temperature. Look at the temperatures and find the average for the week. Check the correct answer.

Finding an average: add each number, then divide by the total number of addends — in this case you will have 7 addends.

76 degrees

79 degrees

77 degrees

Which seasons could it be based on what you know about seasons and temperature? Check **all that could apply:**

Winter

Summer

Fall
