

Protecting Our Homes

When severe weather happens, people need to take steps to protect their homes. In an area that often has excessive rain and sometimes floods, people fill sandbags to create a barrier to protect their home from flooding. They may also want to be sure that their rain gutters are clear, so that water properly drains off of the roof. Properly sealing windows with a material called caulk helps to ensure that water cannot get into the home through windows.

Check off all of the options that would help protect this home in the event of excessive rain.

clear gutters

board up windows

insulate their home

properly seal

sandbag barrier

remove dead trees and branches
