

Finding Corners

A corner is where 2 sides (straight lines) meet.

Check the box next to the corners on each shape.

The worksheet contains four shapes, each with small blue boxes placed at its corners for marking. The shapes are:

- An orange square with four boxes at its corners.
- A blue circle with four boxes at its top, bottom, left, and right positions.
- A green triangle with three boxes at its top, bottom-left, and bottom-right positions.
- A purple rectangle with eight boxes at its corners and midpoints of its longer sides.
