

Shapes in Different Positions

Draw a line to match the real-world object to its shape.
Remember that shapes can be moved in different positions,
but are still the same shape.

Two sets of dashed green arrows with square endpoints point from the flag to the square and the triangle, and from the lattice to the square and the triangle.

Two sets of dashed green arrows with square endpoints point from the steering wheel to the circle and the rounded rectangle, and from the door to the circle and the rounded rectangle.
